

# Harnessing AI for Next-Gen Threat Detection & Response

Securing Telecom Networks & Digital  
Infrastructure in the era of 5G

Zeina Zakhour

VP, Global CTO Cybersecurity

@ZeinaZakhour

ENISA Telecom & Digital Infrastructure Security Forum

20<sup>th</sup> of March 2025

The Atos logo is displayed in white, bold, sans-serif font against the dark blue background. The letters 'A', 't', and 'o' are lowercase, while 'S' is uppercase. The 't' and 'o' are connected, and the 'S' is slightly larger and more prominent.

# Navigating the Cyber Risk landscape in Telecom

## Application Transformation, Data & BSS

-  Telco Operational Excellence powered by automation
-  BSS Transformation
-  Customer Engagement Platform
-  Enable Digital Marketplace and Data Monetization
-  Gen AI Product & Service Offerings

## Telco B2B Solutions and Services

-  B2B Cloud
-  Edge Computing - Video Analytics
-  Mobile Private Networks
-  Gen AI Product & Service Offerings

## OSS-MANO and Next Generation Networks

-  OSS MANO
-  5G Networks
-  Network on the Cloud
-  Gen AI Product & Service Offerings

**300%**  
increase in cyber attacks against satellite infrastructure over last five years

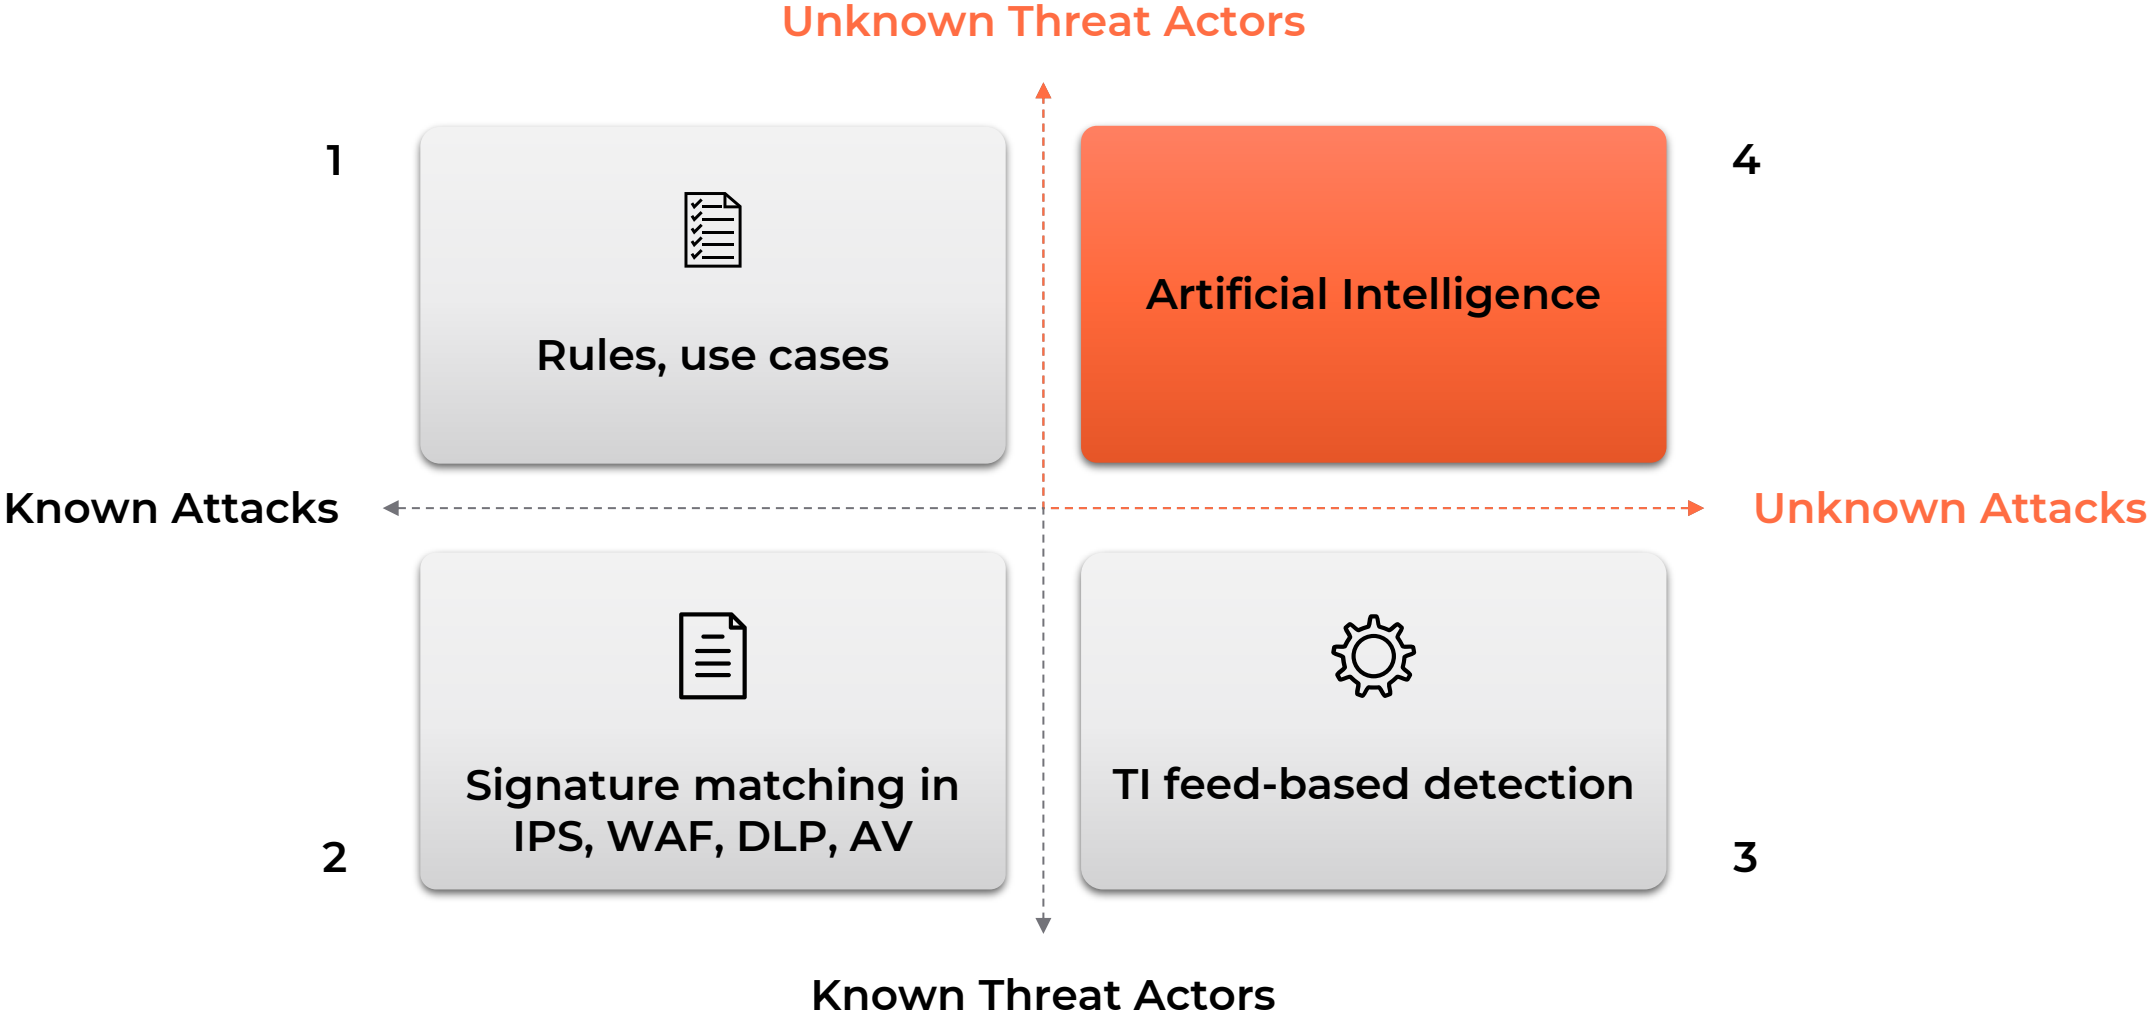

## Cybersecurity Risks

-  Regulatory Pressure & Compliance Overload
-  Identity (machine, consumers) is the new perimeter
-  Complexity (5G, IoT, Omnichannel, etc.) & disconnected security stack
-  API is the new Single Point Of Failure
-  Supply Chain is the new attack surface (digital sovereignty)
-  The constantly changing business model introduces new cyber risks
-  Ever changing Cyber threat Landscape

**Third**

Most targeted industry by cybercriminals in the Telecommunication & Media Industry

# AI is for Precision & Adaptability – not the Panacea

“

**84%** of MITRE ATT&CK

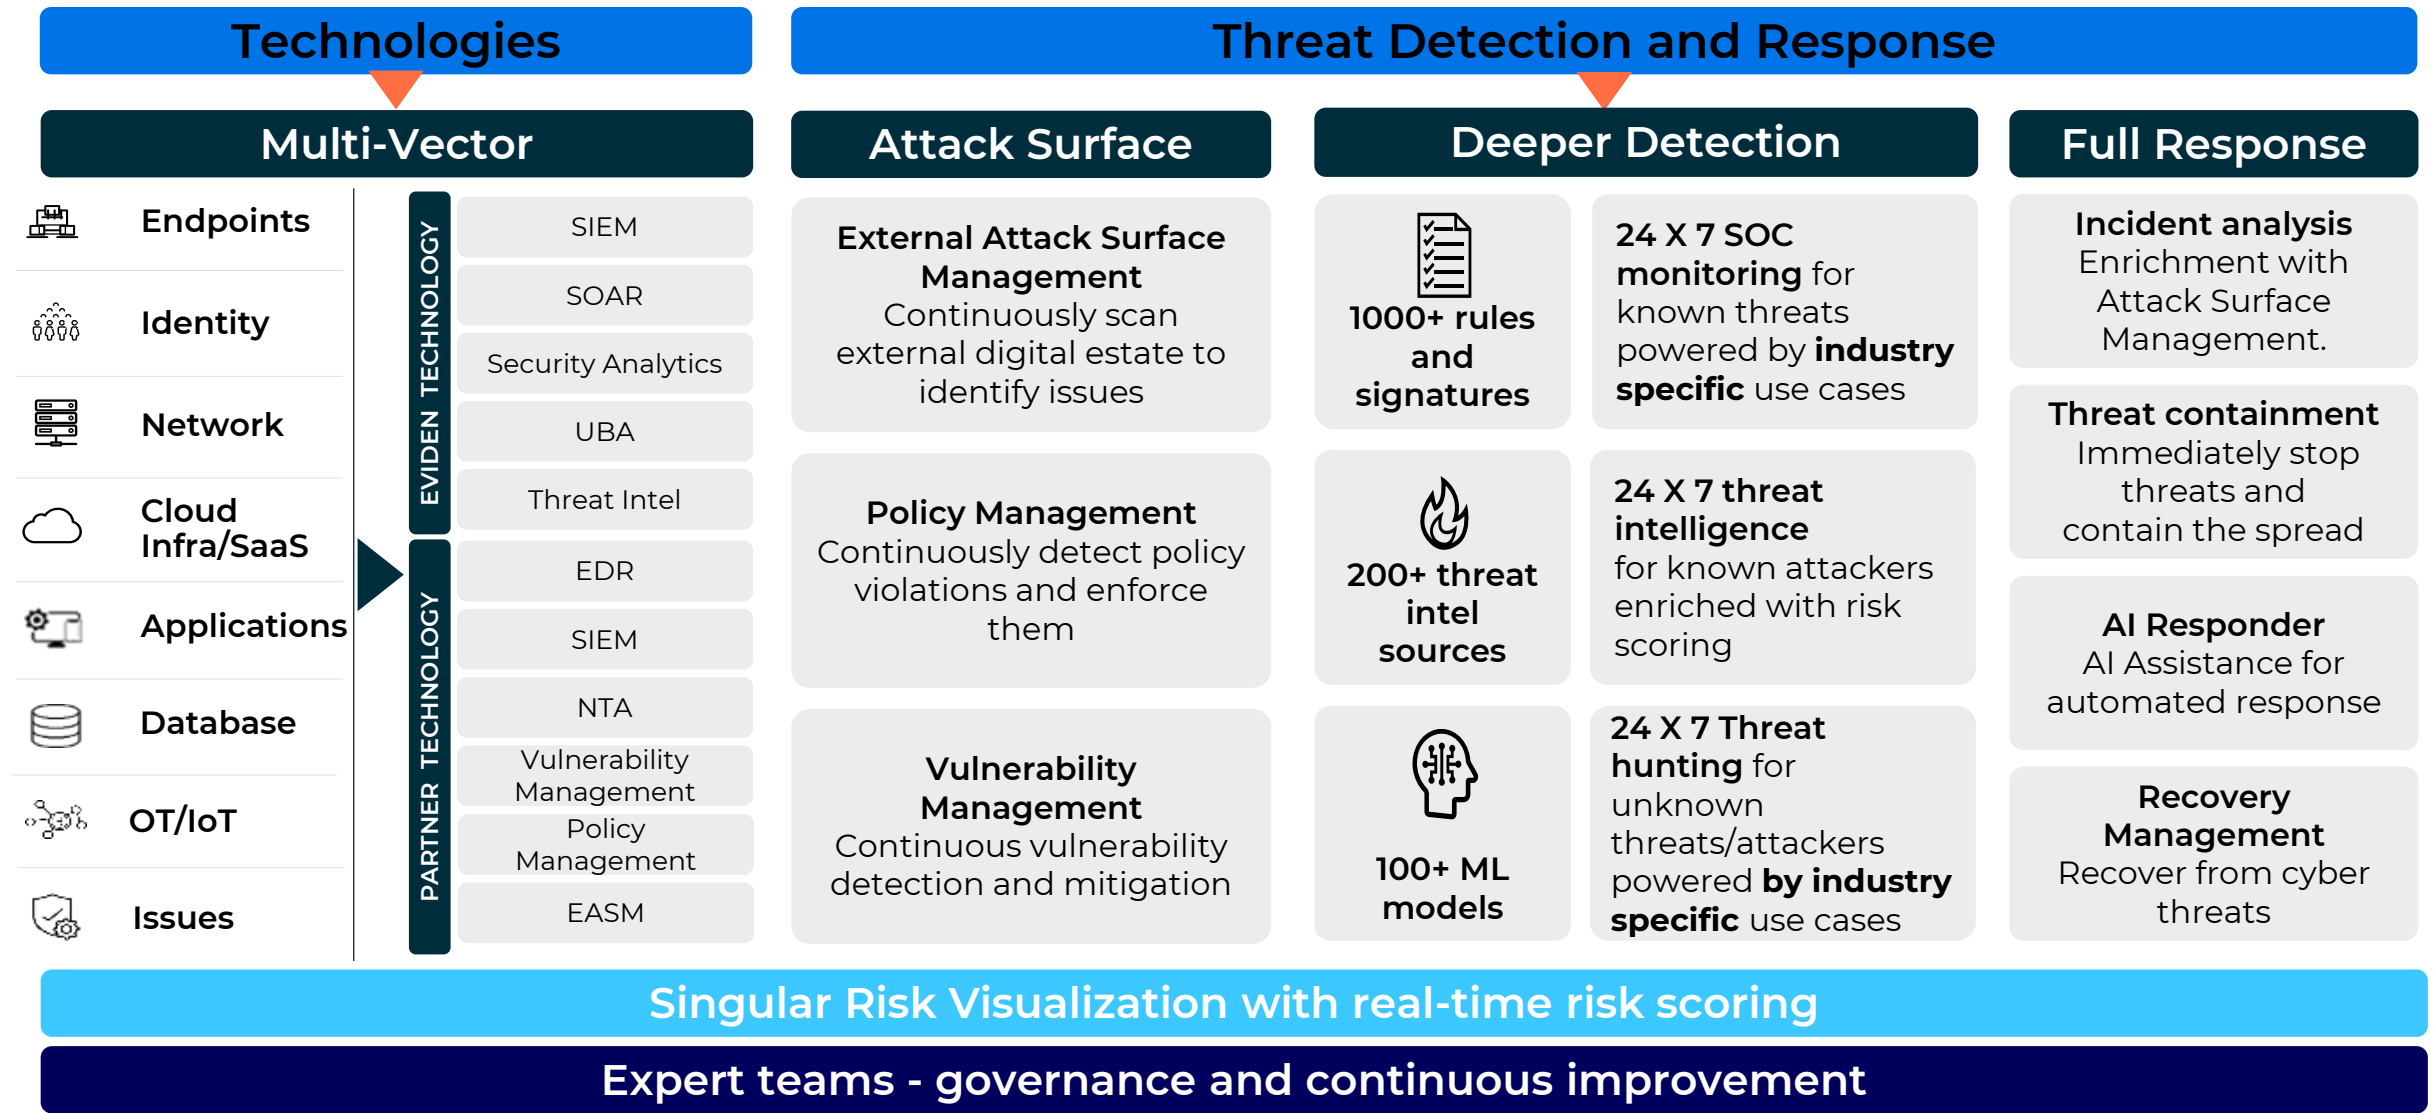

techniques are not covered by  
traditional rules & signatures

”

## **Artificial Intelligence in Cybersecurity**

- Rapid synthesis of voluminous data
- Automated threat detection and response
- Early detection and proactive defense
- Coverage of unknown threats

# Advanced Detection and Response powered by Alsaac Platform

# Threat Hunting Using AI

## Anomaly Based

Learn normal  
Login patterns,  
Data transfer, Email  
transactions  
Detect abnormal

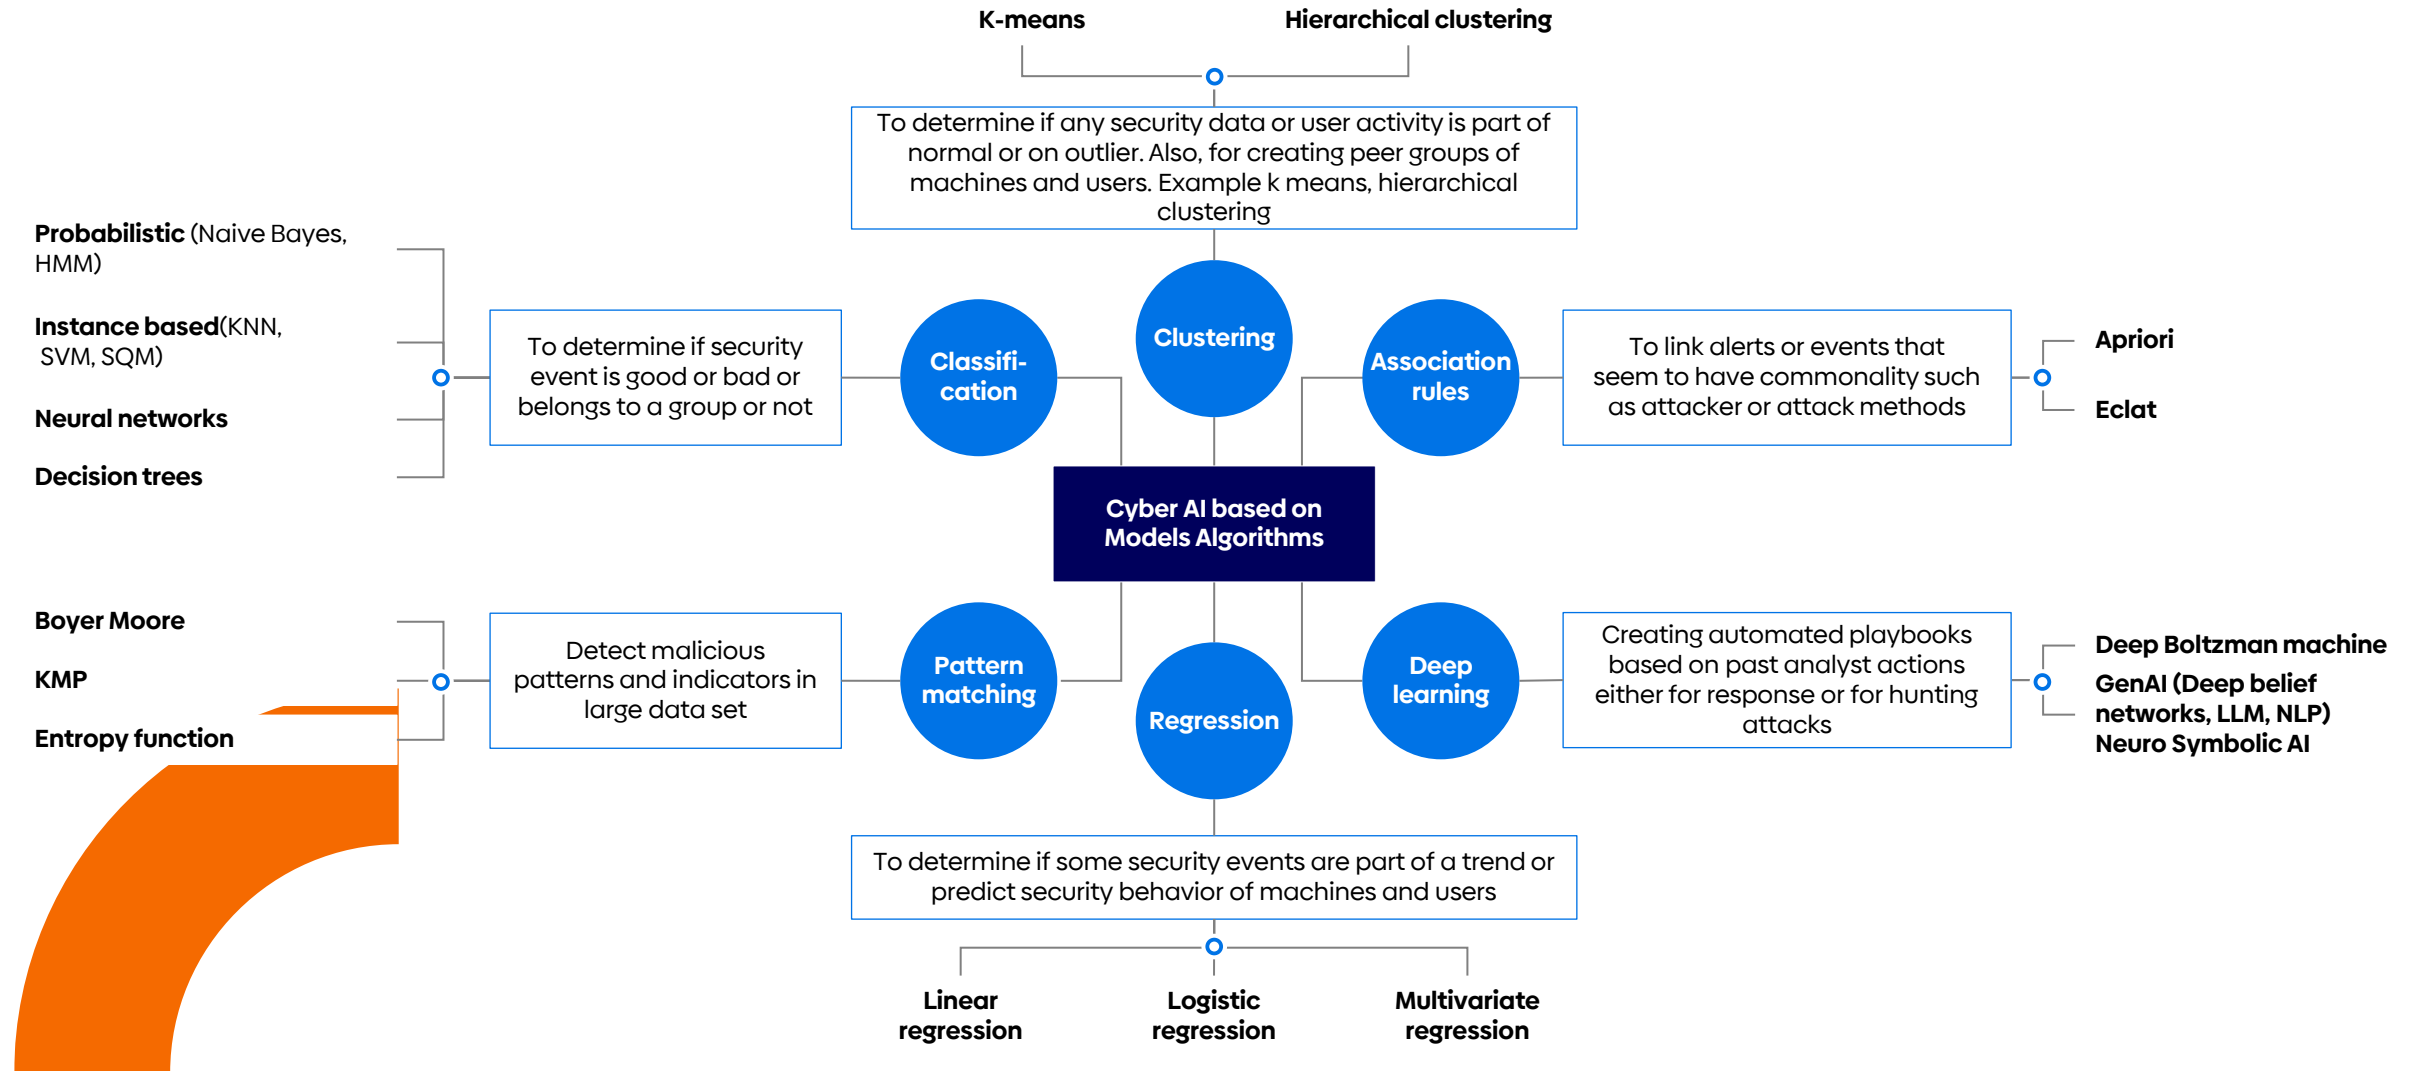

## Hypothesis based

Learn Malicious  
patterns  
Detect similar

# AI Algorithms for Advanced threat Detection

# What the future holds?

## AI-first Security

Security for AI  
(Now!)

AI-powered Autonomous  
& self-healing  
Cybersecurity
